Target Details

Alternative Name:	TP53 (TP53 Products)
Background:	Description: Acts as a tumor suppressor in many tumor types, induces growth arrest or
	apoptosis depending on the physiological circumstances and cell type. Involved in cell cycle
	regulation as a trans-activator that acts to negatively regulate cell division by controlling a set of
	genes required for this process. One of the activated genes is an inhibitor of cyclin-dependent
	kinases. Apoptosis induction seems to be mediated either by stimulation of BAX and FAS
	antigen expression, or by repression of Bcl-2 expression. In cooperation with mitochondrial
	PPIF is involved in activating oxidative stress-induced necrosis, the function is largely
	independent of transcription. Induces the transcription of long intergenic non-coding RNA p21
	(lincRNA-p21) and lincRNA-Mkln1. LincRNA-p21 participates in TP53-dependent transcriptional
	repression leading to apoptosis and seem to have to effect on cell-cycle regulation. Implicated
	in Notch signaling cross-over. Prevents CDK7 kinase activity when associated to CAK complex
	in response to DNA damage, thus stopping cell cycle progression. Isoform 2 enhances the
	transactivation activity of isoform 1 from some but not all TP53-inducible promoters. Isoform 4
	suppresses transactivation activity and impairs growth suppression mediated by isoform 1.
	Isoform 7 inhibits isoform 1-mediated apoptosis. Regulates the circadian clock by repressing
	CLOCK-ARNTL/BMAL1-mediated transcriptional activation of PER2 (PubMed:24051492).

Immunofluorescence (fixed cells)

Image 1. ABIN6267292 staining MDA-MB-435 by IF/ICC. The sample were fixed with PFA and permeabilized in 0.1% Triton X-100,then blocked in 10% serum for 45 minutes at 25°C. The primary antibody was diluted at 1/200 and incubated with the sample for 1 hour at 37°C. An Alexa Fluor 594 conjugated goat anti-rabbit IgG (H+L) Ab, diluted at 1/600, was used as the secondary antibody.

Immunohistochemistry

Image 2. ABIN6267292 at 1/100 staining Mouse colon tissue by IHC-P. The sample was formaldehyde fixed and a heat mediated antigen retrieval step in citrate buffer was performed. The sample was then blocked and incubated with the antibody for 1.5 hours at 22°C. An HRP conjugated goat anti-rabbit antibody was used as the secondary.
