# Datasheet for ABIN6256119 anti-AKT1 antibody (pSer124)

Images

## Overview

Quantity:	100 μL
Target:	AKT1
Binding Specificity:	pSer124
Reactivity:	Human, Mouse, Rat
Host:	Rabbit
Clonality:	Polyclonal
Conjugate:	This AKT1 antibody is un-conjugated
Application:	Western Blotting (WB), ELISA, Immunohistochemistry (IHC), Immunofluorescence (IF), Immunocytochemistry (ICC)

## Product Details

Immunogen:	A synthesized peptide derived from human Akt1 around the phosphorylation site of Ser124.
Isotype:	lgG
Specificity:	Phospho-AKT1 (Ser124) Antibody detects endogenous levels of AKT1 only when phosphorylated at Ser124.
Predicted Reactivity:	Pig,Bovine,Horse,Dog,Chicken
Purification:	The antibody is from purified rabbit serum by affinity purification via sequential chromatography on phospho- and non-phospho-peptide affinity columns.

Target Details	
Alternative Name:	AKT1 (AKT1 Products)
Background:	Description: AKT1 is one of 3 closely related serine/threonine-protein kinases (AKT1, AKT2 and
	AKT3) called the AKT kinase, and which regulate many processes including metabolism,
	proliferation, cell survival, growth and angiogenesis. This is mediated through serine and/or
	threonine phosphorylation of a range of downstream substrates. Over 100 substrate
	candidates have been reported so far, but for most of them, no isoform specificity has been
	reported. AKT is responsible of the regulation of glucose uptake by mediating insulin-induced
	translocation of the SLC2A4/GLUT4 glucose transporter to the cell surface. Phosphorylation of
	PTPN1 at 'Ser-50' negatively modulates its phosphatase activity preventing dephosphorylation
	of the insulin receptor and the attenuation of insulin signaling. Phosphorylation of TBC1D4
	triggers the binding of this effector to inhibitory 14-3-3 proteins, which is required for insulin-
	stimulated glucose transport. AKT regulates also the storage of glucose in the form of glycoge
	by phosphorylating GSK3A at 'Ser-21' and GSK3B at 'Ser-9', resulting in inhibition of its kinase
	activity. Phosphorylation of GSK3 isoforms by AKT is also thought to be one mechanism by
	which cell proliferation is driven. AKT regulates also cell survival via the phosphorylation of
	MAP3K5 (apoptosis signal-related kinase). Phosphorylation of 'Ser-83' decreases MAP3K5
	kinase activity stimulated by oxidative stress and thereby prevents apoptosis. AKT mediates
	insulin-stimulated protein synthesis by phosphorylating TSC2 at 'Ser-939' and 'Thr-1462',
	thereby activating mTORC1 signaling and leading to both phosphorylation of 4E-BP1 and in
	activation of RPS6KB1. AKT is involved in the phosphorylation of members of the FOXO factors
	(Forkhead family of transcription factors), leading to binding of 14-3-3 proteins and cytoplasmi
	localization. In particular, FOXO1 is phosphorylated at 'Thr-24', 'Ser-256' and 'Ser-319'. FOXO3
	and FOXO4 are phosphorylated on equivalent sites. AKT has an important role in the regulation
	of NF-kappa-B-dependent gene transcription and positively regulates the activity of CREB1
	(cyclic AMP (cAMP)-response element binding protein). The phosphorylation of CREB1 induces
	the binding of accessory proteins that are necessary for the transcription of pro-survival genes
	such as BCL2 and MCL1. AKT phosphorylates 'Ser-454' on ATP citrate lyase (ACLY), thereby
	potentially regulating ACLY activity and fatty acid synthesis. Activates the 3B isoform of cyclic
	nucleotide phosphodiesterase (PDE3B) via phosphorylation of 'Ser-273', resulting in reduced
	cyclic AMP levels and inhibition of lipolysis. Phosphorylates PIKFYVE on 'Ser-318', which result
	in increased PI3P-5 activity. The Rho GTPase-activating protein DLC1 is another substrate and
	its phosphorylation is implicated in the regulation cell proliferation and cell growth. AKT plays a
	role as key modulator of the AKT-mTOR signaling pathway controlling the tempo of the proces
	of newborn neurons integration during adult neurogenesis, including correct neuron positioning
	dendritic development and synapse formation. Signals downstream of phosphatidylinositol 3-

kinase (PI3K) to mediate the effects of various growth factors such as platelet-derived growth
factor (PDGF), epidermal growth factor (EGF), insulin and insulin-like growth factor I (IGF-I). AKT
mediates the antiapoptotic effects of IGF-I. Essential for the SPATA13-mediated regulation of
cell migration and adhesion assembly and disassembly. May be involved in the regulation of the
placental development. Phosphorylates STK4/MST1 at 'Thr-120' and 'Thr-387' leading to
inhibition of its: kinase activity, nuclear translocation, autophosphorylation and ability to
phosphorylate FOXO3. Phosphorylates STK3/MST2 at 'Thr-117' and 'Thr-384' leading to
inhibition of its: cleavage, kinase activity, autophosphorylation at Thr-180, binding to RASSF1
and nuclear translocation. Phosphorylates SRPK2 and enhances its kinase activity towards
SRSF2 and ACIN1 and promotes its nuclear translocation. Phosphorylates RAF1 at 'Ser-259'
and negatively regulates its activity. Phosphorylation of BAD stimulates its pro-apoptotic
activity. Phosphorylates KAT6A at 'Thr-369' and this phosphorylation inhibits the interaction of
KAT6A with PML and negatively regulates its acetylation activity towards p53/TP53.
Gene: AKT1

Molecular Weight:	60kDa
Gene ID:	207
UniProt:	P31749
Pathways:	PI3K-Akt Signaling, RTK Signaling, TCR Signaling, AMPK Signaling, Interferon-gamma Pathway,
	TLR Signaling, Fc-epsilon Receptor Signaling Pathway, EGFR Signaling Pathway, Neurotrophin
	Signaling Pathway, Response to Water Deprivation, Regulation of Actin Filament Polymerization
	, Carbohydrate Homeostasis, Glycosaminoglycan Metabolic Process, Cellular Glucan Metabolic
	Process, Regulation of Muscle Cell Differentiation, Cell-Cell Junction Organization, Regulation of
	Cell Size, Skeletal Muscle Fiber Development, Regulation of Carbohydrate Metabolic Process,
	Hepatitis C, Protein targeting to Nucleus, CXCR4-mediated Signaling Events, Signaling Events
	mediated by VEGFR1 and VEGFR2, Negative Regulation of intrinsic apoptotic Signaling,
	Thromboxane A2 Receptor Signaling, Signaling of Hepatocyte Growth Factor Receptor, Positive
	Regulation of fat Cell Differentiation, VEGFR1 Specific Signals, VEGF Signaling, Warburg Effect

# Application Details

Application Notes: WB 1:500-1:2000, IHC 1:50-1:200, IF/ICC 1:100-1:500, ELISA(peptide) 1:20000-1:40000

Restrictions:

For Research Use only

## Handling

Format:	Liquid
Concentration:	1 mg/mL
Buffer:	Rabbit IgG in phosphate buffered saline , pH 7.4, 150 mM NaCl, 0.02 % sodium azide and 50 % glycerol.
Preservative:	Sodium azide
Precaution of Use:	This product contains Sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.
Storage:	-20 °C
Storage Comment:	Store at -20 °C. Stable for 12 months from date of receipt.
Expiry Date:	12 months

## Images

## Immunohistochemistry

**Image 1.** ABIN6267471 at 1/200 staining Mouse testis tissue sections by IHC-P. The tissue was formaldehyde fixed and a heat mediated antigen retrieval step in citrate buffer was performed. The tissue was then blocked and incubated with the antibody for 1.5 hours at 22°C. An HRP conjugated goat anti-rabbit antibody was used as the secondary.

### Immunohistochemistry

**Image 2.** ABIN6267471 at 1/200 staining Mouse lung tissue sections by IHC-P. The tissue was formaldehyde fixed and a heat mediated antigen retrieval step in citrate buffer was performed. The tissue was then blocked and incubated with the antibody for 1.5 hours at 22°C. An HRP conjugated goat anti-rabbit antibody was used as the secondary.
