# Datasheet for ABIN6256730 anti-FAK antibody (pTyr397)

8 Images

3 Publications

#### Overview

| Quantity:            | 100 μL  |
|----------------------|---|
| Target:              | FAK (PTK2)  |
| Binding Specificity: | pTyr397   |
| Reactivity:          | Human, Mouse, Rat   |
| Host:                | Rabbit  |
| Clonality:           | Polyclonal  |
| Conjugate:           | This FAK antibody is un-conjugated  |
| Application:         | Western Blotting (WB), ELISA, Immunohistochemistry (IHC), Immunofluorescence (IF),<br>Immunocytochemistry (ICC) |

## Product Details

| Immunogen:            | A synthesized peptide derived from human FAK around the phosphorylation site of Tyr397.   |
|-----------------------|---|
| lsotype:              | lgG   |
| Specificity:          | Phospho-FAK (Tyr397) Antibody detects endogenous levels of FAK only when phosphorylated at Tyrosine 397.  |
| Predicted Reactivity: | Pig,Horse,Sheep,Rabbit,Dog,Chicken,Xenopus  |
| Purification:         | The antibody is from purified rabbit serum by affinity purification via sequential chromatography on phospho- and non-phospho-peptide affinity columns. |

## Target Details

Target:

FAK (PTK2)

| Target Details    |   |
|-------------------|---|
| Alternative Name: | PTK2 (PTK2 Products)  |
| Background:       | Description: Non-receptor protein-tyrosine kinase that plays an essential role in regulating cell |
|                   | migration, adhesion, spreading, reorganization of the actin cytoskeleton, formation and           |
|                   | disassembly of focal adhesions and cell protrusions, cell cycle progression, cell proliferation   |
|                   | and apoptosis. Required for early embryonic development and placenta development. Required        |
|                   | for embryonic angiogenesis, normal cardiomyocyte migration and proliferation, and normal          |
|                   | heart development. Regulates axon growth and neuronal cell migration, axon branching and          |
|                   | synapse formation, required for normal development of the nervous system. Plays a role in         |
|                   | osteogenesis and differentiation of osteoblasts. Functions in integrin signal transduction, but   |
|                   | also in signaling downstream of numerous growth factor receptors, G-protein coupled               |
|                   | receptors (GPCR), EPHA2, netrin receptors and LDL receptors. Forms multisubunit signaling         |
|                   | complexes with SRC and SRC family members upon activation, this leads to the                      |
|                   | phosphorylation of additional tyrosine residues, creating binding sites for scaffold proteins,    |
|                   | effectors and substrates. Regulates numerous signaling pathways. Promotes activation of           |
|                   | phosphatidylinositol 3-kinase and the AKT1 signaling cascade. Promotes activation of              |
|                   | MAPK1/ERK2, MAPK3/ERK1 and the MAP kinase signaling cascade. Promotes localized and               |
|                   | transient activation of guanine nucleotide exchange factors (GEFs) and GTPase-activating          |
|                   | proteins (GAPs), and thereby modulates the activity of Rho family GTPases. Signaling via CAS      |
|                   | family members mediates activation of RAC1. Recruits the ubiquitin ligase MDM2 to P53/TP53        |
|                   | in the nucleus, and thereby regulates P53/TP53 activity, P53/TP53 ubiquitination and              |
|                   | proteasomal degradation. Phosphorylates SRC, this increases SRC kinase activity.                  |
|                   | Phosphorylates ACTN1, ARHGEF7, GRB7, RET and WASL. Promotes phosphorylation of PXN                |
|                   | and STAT1, most likely PXN and STAT1 are phosphorylated by a SRC family kinase that is            |
|                   | recruited to autophosphorylated PTK2/FAK1, rather than by PTK2/FAK1 itself. Promotes              |
|                   | phosphorylation of BCAR1, GIT2 and SHC1, this requires both SRC and PTK2/FAK1. Promotes           |
|                   | phosphorylation of BMX and PIK3R1. Isoform 6 (FRNK) does not contain a kinase domain and          |
|                   | inhibits PTK2/FAK1 phosphorylation and signaling. Its enhanced expression can attenuate the       |
|                   | nuclear accumulation of LPXN and limit its ability to enhance serum response factor (SRF)-        |
|                   | dependent gene transcription.   |
|                   | Gene: PTK2  |
| Molecular Weight: | 119kDa  |
| Gene ID:          | 5747  |
| UniProt:          | Q05397  |
| Pathways:         | Response to Growth Hormone Stimulus, CXCR4-mediated Signaling Events, Smooth Muscle               |

### Target Details

#### Cell Migration, Signaling of Hepatocyte Growth Factor Receptor, VEGF Signaling

| Application Notes: | WB 1:500-1:2000, IHC 1:100-1:500, IF/ICC 1:100-1:500, ELISA(peptide) 1:20000-1:40000                                   |
|--------------------|--|
| Restrictions:      | For Research Use only  |
| Handling           |  |
| Format:            | Liquid   |
| Concentration:     | 1 mg/mL  |
| Buffer:            | Rabbit IgG in phosphate buffered saline , pH 7.4, 150 mM NaCl, 0.02 % sodium azide and 50 % glycerol.                  |
| Preservative:      | Sodium azide   |
| Precaution of Use: | This product contains Sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only. |
| Storage:           | -20 °C   |
| Storage Comment:   | Store at -20 °C. Stable for 12 months from date of receipt.  |
| Expiry Date:       | 12 months  |

#### Immunohistochemistry

**Image 1.** ABIN6267607 at 1/200 staining Human lung cancer tissue sections by IHC-P. The tissue was formaldehyde fixed and a heat mediated antigen retrieval step in citrate buffer was performed. The tissue was then blocked and incubated with the antibody for 1.5 hours at 22°C. An HRP conjugated goat anti-rabbit antibody was used as the secondary.

#### Immunofluorescence (fixed cells)

**Image 2.** ABIN6267607 staining HepG2 by IF/ICC. The sample were fixed with PFA and permeabilized in 0.1% Triton X-100,then blocked in 10% serum for 45 minutes at 25jãC. The primary antibody was diluted at 1/200 and incubated with the sample for 1 hour at 37jãC. An Alexa Fluor 594 conjugated goat anti-rabbit IgG (H+L) Ab, diluted at 1/600, was used as the secondary antibod

#### Immunohistochemistry

**Image 3.** ABIN6267607 at 1/200 staining Human heart tissue sections by IHC-P. The tissue was formaldehyde fixed and a heat mediated antigen retrieval step in citrate buffer was performed. The tissue was then blocked and incubated with the antibody for 1.5 hours at 22°C. An HRP conjugated goat anti-rabbit antibody was used as the secondary.

Please check the product details page for more images. Overall 8 images are available for ABIN6256730.
