Target Details		
Alternative Name:	EIF3F (EIF3F Products)	
Background:	Description: Component of the eukaryotic translation initiation factor 3 (eIF-3) complex, which	
	is required for several steps in the initiation of protein synthesis (PubMed:17581632,	
	PubMed:25849773, PubMed:27462815). The eIF-3 complex associates with the 40S ribosome	
	and facilitates the recruitment of eIF-1, eIF-1A, eIF-2:GTP:methionyl-tRNAi and eIF-5 to form the	
	43S pre-initiation complex (43S PIC). The eIF-3 complex stimulates mRNA recruitment to the	
	43S PIC and scanning of the mRNA for AUG recognition. The eIF-3 complex is also required for	
	disassembly and recycling of post-termination ribosomal complexes and subsequently	
	prevents premature joining of the 40S and 60S ribosomal subunits prior to initiation	
	(PubMed:17581632). The eIF-3 complex specifically targets and initiates translation of a subset	
	of mRNAs involved in cell proliferation, including cell cycling, differentiation and apoptosis, and	
	uses different modes of RNA stem-loop binding to exert either translational activation or	
	repression (PubMed:25849773).
