# Datasheet for ABIN6257226 anti-GRK5 antibody (Internal Region)

3 Images

### Overview

| Quantity:            | 100 µL  |
|----------------------|---|
| Target:              | GRK5  |
| Binding Specificity: | Internal Region   |
| Reactivity:          | Human, Mouse, Rat   |
| Host:                | Rabbit  |
| Clonality:           | Polyclonal  |
| Conjugate:           | This GRK5 antibody is un-conjugated   |
| Application:         | Western Blotting (WB), ELISA, Immunohistochemistry (IHC), Immunofluorescence (IF),<br>Immunocytochemistry (ICC) |

## Product Details

| Immunogen:            | A synthesized peptide derived from human GRK5, corresponding to a region within the internal amino acids.                              |
|-----------------------|--|
| lsotype:              | lgG  |
| Specificity:          | GRK5 Antibody detects endogenous levels of total GRK5.   |
| Predicted Reactivity: | Pig,Bovine,Horse,Sheep,Dog,Chicken   |
| Purification:         | The antiserum was purified by peptide affinity chromatography using SulfoLink <sup>TM</sup> Coupling Resin (Thermo Fisher Scientific). |

### Target Details

| Target: | GRK5   |  |

| Target Details    |  |
|-------------------|--|
| Alternative Name: | GRK5 (GRK5 Products)   |
| Background:       | Description: Serine/threonine kinase that phosphorylates preferentially the activated forms of a   |
|                   | variety of G-protein-coupled receptors (GPCRs). Such receptor phosphorylation initiates beta-      |
|                   | arrestin-mediated receptor desensitization, internalization, and signaling events leading to their |
|                   | down-regulation. Phosphorylates a variety of GPCRs, including adrenergic receptors,                |
|                   | muscarinic acetylcholine receptors (more specifically Gi-coupled M2/M4 subtypes), dopamine         |
|                   | receptors and opioid receptors. In addition to GPCRs, also phosphorylates various substrates:      |
|                   | Hsc70-interacting protein/ST13, TP53/p53, HDAC5, and arrestin-1/ARRB1. Phosphorylation of          |
|                   | ARRB1 by GRK5 inhibits G-protein independent MAPK1/MAPK3 signaling downstream of 5HT4-             |
|                   | receptors. Phosphorylation of HDAC5, a repressor of myocyte enhancer factor 2 (MEF2) leading       |
|                   | to nuclear export of HDAC5 and allowing MEF2-mediated transcription. Phosphorylation of            |
|                   | TP53/p53, a crucial tumor suppressor, inhibits TP53/p53-mediated apoptosis. Phosphorylation        |
|                   | of ST13 regulates internalization of the chemokine receptor. Phosphorylates rhodopsin (RHO)        |
|                   | (in vitro) and a non G-protein-coupled receptor, LRP6 during Wnt signaling (in vitro).             |
|                   | Gene: GRK5   |
| Molecular Weight: | 68 kDa   |
| Gene ID:          | 2869   |
| UniProt:          | P34947   |
| Pathways:         | Myometrial Relaxation and Contraction, Regulation of G-Protein Coupled Receptor Protein            |
|                   | Signaling  |

## Application Details

| Application Notes: | WB 1:500-1:1000, IF/ICC 1:100-1:500, IHC 1:50-1:200, ELISA(peptide) 1:20000-1:40000 |
|--------------------|---|
| Restrictions:      | For Research Use only   |

# Handling

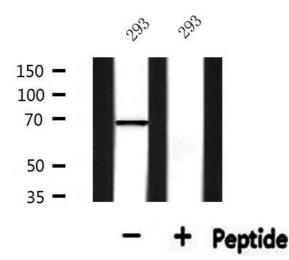

| Format:        | Liquid  |
|----------------|---|
| Concentration: | 1 mg/mL   |
| Buffer:        | Rabbit IgG in phosphate buffered saline , pH 7.4, 150 mM NaCl, 0.02 % sodium azide and 50 % glycerol. |
| Preservative:  | Sodium azide  |

|--------------------|--|
| Precaution of Use: | This product contains Sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only. |
| Storage:           | -20 °C   |
| Storage Comment:   | Store at -20 °C. Stable for 12 months from date of receipt.  |
| Expiry Date:       | 12 months  |

Handling

#### Western Blotting

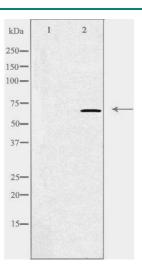

**Image 1.** Western blot analysis of extracts from 293, using GRK5 Antibody.

#### Immunofluorescence (fixed cells)

**Image 2.** ABIN6274237 staining HeLa cells by IF/ICC. The sample were fixed with PFA and permeabilized in 0.1% Triton X-100,then blocked in 10% serum for 45 minutes at 25°C. The primary antibody was diluted at 1/200 and incubated with the sample for 1 hour at 37°C. An Alexa Fluor 594 conjugated goat anti-rabbit IgG (H+L) antibody(Cat.# S0006), diluted at 1/600, was used as secondary antibody.
