Target Details
Target:
ARL3

Target Details

| Alternative Name: | ARL3 (ARL3 Products) |
| :--- | :--- |
| Background: | Description: Small GTP-binding protein which cycles between an inactive GDP-bound and an <br> active GTP-bound form, and the rate of cycling is regulated by guanine nucleotide exchange <br> factors (GEF) and GTPase-activating proteins (GAP). Required for normal cytokinesis and cilia <br> signaling. Requires assistance from GTPase-activating proteins (GAPs) like RP2 and PDE6D, in <br> order to cycle between inactive GDP-bound and active GTP-bound forms. Required for targeting <br> proteins such as NPHP3 to the ciliary membrane by releasing myristoylated NPHP3 from <br> UNC119B cargo adapter into the cilium. Does not act as an allosteric activator of the cholera <br> toxin catalytic subunit. <br> Gene: ARL3 |
| Molecular Weight: | 20 kDa |

## Immunohistochemistry

Image 1. ABIN6272987 at $1 / 100$ staining Human liver tissue by IHC-P. The sample was formaldehyde fixed and a heat mediated antigen retrieval step in citrate buffer was performed. The sample was then blocked and incubated with the antibody for 1.5 hours at $22^{\circ} \mathrm{C}$. An HRP conjugated goat anti-rabbit antibody was used as the secondary.
