Target Details		
Alternative Name:	HMGB3 (HMGB3 Products)	
Background:	Description: Multifunctional protein with various roles in different cellular compartments. May act in a redox sensitive manner. Associates with chromatin and binds DNA with a preference to	
	non-canonical DNA structures such as single-stranded DNA. Can bent DNA and enhance DNA	
	flexibility by looping thus providing a mechanism to promote activities on various gene promoters (By similarity). Proposed to be involved in the innate immune response to nucleic	
	acids by acting as a cytoplasmic promiscuous immunogenic DNA/RNA sensor (By similarity).	
	Negatively regulates B-cell and myeloid cell differentiation. In hematopoietic stem cells may	
	regulate the balance between self-renewal and differentiation. Involved in negative regulation of	
	canonical Wnt signaling (By similarity).	
	Gene: HMGB3
