Target Details

Alternative Name:	IFITM3 (IFITM3 Products)		
Background:	Description: IFN-induced antiviral protein which disrupts intracellular cholesterol homeostasis.		
	Inhibits the entry of viruses to the host cell cytoplasm by preventing viral fusion with cholesterol		
	depleted endosomes. May inactivate new enveloped viruses which buds out of the infected cell,		
	by letting them go out with a cholesterol depleted membrane. Active against multiple viruses,		
	including influenza A virus, SARS coronavirus (SARS-CoV), Marburg virus (MARV) and Ebola		
	virus (EBOV), Dengue virus (DNV), West Nile virus (WNV), human immunodeficiency virus type 1		
	(HIV-1) and vesicular stomatitis virus (VSV). Can inhibit: influenza virus hemagglutinin protein-		
	mediated viral entry, MARV and EBOV GP1,2-mediated viral entry, SARS-CoV S protein-mediated		
	viral entry and VSV G protein-mediated viral entry. Plays a critical role in the structural stability		
	and function of vacuolar ATPase (v-ATPase). Establishes physical contact with the v-ATPase of		
	endosomes which is critical for proper clathrin localization and is also required for the function		
	of the v-ATPase to lower the pH in phagocytic endosomes thus establishing an antiviral state.

The primary antibody was diluted at 1/200 and incubated with the sample for 1 hour at 37¡ãC. An Alexa Fluor 594 conjugated goat anti-rabbit IgG (H+L) antibody(Cat.# S0006), diluted at 1/600, was used as secondary antibod
