Target Details

Background:	Description: Regulatory subunit of the calcium activated potassium KCNMA1 (maxiK) channel.
Buonground.	
	Modulates the calcium sensitivity and gating kinetics of KCNMA1, thereby contributing to
	KCNMA1 channel diversity. Increases the apparent Ca2+/voltage sensitivity of the KCNMA1
	channel. It also modifies KCNMA1 channel kinetics and alters its pharmacological properties. It
	slows down the activation and the deactivation kinetics of the channel. Acts as a negative
	regulator of smooth muscle contraction by enhancing the calcium sensitivity to KCNMA1. Its
	presence is also a requirement for internal binding of the KCNMA1 channel opener
	dehydrosoyasaponin I (DHS-1) triterpene glycoside and for external binding of the agonist
	hormone 17-beta-estradiol (E2). Increases the binding activity of charybdotoxin (CTX) toxin to
	KCNMA1 peptide blocker by increasing the CTX association rate and decreasing the
	dissociation rate.
	Gene: KCNMB1
Molecular Weight:	22 kDa
Gene ID:	3779
UniProt:	Q16558
