# Datasheet for ABIN6263424 anti-MTOR antibody

4 Images

7 Publications

Overview

Quantity:	100 µL
Target:	MTOR (mTOR)
Reactivity:	Human, Mouse, Rat, Fish
Host:	Rabbit
Clonality:	Polyclonal
Conjugate:	This MTOR antibody is un-conjugated
Application:	Western Blotting (WB), Immunohistochemistry (IHC), ELISA, Immunofluorescence (IF), Immunocytochemistry (ICC)

### Product Details

Immunogen:	A synthesized peptide derived from human mTOR
lsotype:	lgG
Specificity:	MTOR Antibody detects endogenous levels of total mTOR
Cross-Reactivity:	Fish, Human, Mouse (Murine), Rat (Rattus)
Predicted Reactivity:	Pig(100%), Bovine(100%), Horse(100%), Sheep(100%), Rabbit(100%), Dog(100%), Chicken(100%)
Purification:	The antiserum was purified by peptide affinity chromatography using SulfoLink <sup>TM</sup> Coupling Resin (Thermo Fisher Scientific).

Target Details

Target:

MTOR (mTOR)

Target Details	
Alternative Name:	mTOR (mTOR Products)
Background:	Description: Serine/threonine protein kinase which is a central regulator of cellular metabolism,
	growth and survival in response to hormones, growth factors, nutrients, energy and stress
	signals. MTOR directly or indirectly regulates the phosphorylation of at least 800 proteins.
	Functions as part of 2 structurally and functionally distinct signaling complexes mTORC1 and
	mTORC2 (mTOR complex 1 and 2). Activated mTORC1 up-regulates protein synthesis by
	phosphorylating key regulators of mRNA translation and ribosome synthesis. This includes
	phosphorylation of EIF4EBP1 and release of its inhibition toward the elongation initiation factor
	4E (eiF4E). Moreover, phosphorylates and activates RPS6KB1 and RPS6KB2 that promote
	protein synthesis by modulating the activity of their downstream targets including ribosomal
	protein S6, eukaryotic translation initiation factor EIF4B, and the inhibitor of translation initiation
	PDCD4. Stimulates the pyrimidine biosynthesis pathway, both by acute regulation through
	RPS6KB1-mediated phosphorylation of the biosynthetic enzyme CAD, and delayed regulation,
	through transcriptional enhancement of the pentose phosphate pathway which produces 5-
	phosphoribosyl-1-pyrophosphate (PRPP), an allosteric activator of CAD at a later step in
	synthesis, this function is dependent on the mTORC1 complex. Regulates ribosome synthesis
	by activating RNA polymerase III-dependent transcription through phosphorylation and
	inhibition of MAF1 an RNA polymerase III-repressor. In parallel to protein synthesis, also
	regulates lipid synthesis through SREBF1/SREBP1 and LPIN1. To maintain energy homeostasis
	mTORC1 may also regulate mitochondrial biogenesis through regulation of PPARGC1A.
	mTORC1 also negatively regulates autophagy through phosphorylation of ULK1. Under nutrient
	sufficiency, phosphorylates ULK1 at 'Ser-758', disrupting the interaction with AMPK and
	preventing activation of ULK1. Also prevents autophagy through phosphorylation of the
	autophagy inhibitor DAP. mTORC1 exerts a feedback control on upstream growth factor
	signaling that includes phosphorylation and activation of GRB10 a INSR-dependent signaling
	suppressor. Among other potential targets mTORC1 may phosphorylate CLIP1 and regulate
	microtubules. As part of the mTORC2 complex MTOR may regulate other cellular processes
	including survival and organization of the cytoskeleton. Plays a critical role in the
	phosphorylation at 'Ser-473' of AKT1, a pro-survival effector of phosphoinositide 3-kinase,
	facilitating its activation by PDK1. mTORC2 may regulate the actin cytoskeleton, through
	phosphorylation of PRKCA, PXN and activation of the Rho-type guanine nucleotide exchange
	factors RHOA and RAC1A or RAC1B. mTORC2 also regulates the phosphorylation of SGK1 at
	'Ser-422' (PubMed:12087098, PubMed:12150925, PubMed:12150926, PubMed:12231510,

	osteoclastogenesis by adjusting the expression of CEBPB isoforms (By similarity).
	Gene: MTOR
Molecular Weight:	289kDa
Gene ID:	2475
UniProt:	P42345
Pathways:	PI3K-Akt Signaling, RTK Signaling, AMPK Signaling, Interferon-gamma Pathway, Fc-epsilon
	Receptor Signaling Pathway, EGFR Signaling Pathway, Neurotrophin Signaling Pathway,
	Regulation of Actin Filament Polymerization, Regulation of Muscle Cell Differentiation,
	Regulation of Cell Size, Skeletal Muscle Fiber Development, Regulation of Carbohydrate
	Metabolic Process, Autophagy, CXCR4-mediated Signaling Events, BCR Signaling, Warburg
	Effect

## Application Details

Application Notes:	WB 1:500-1:2000, IHC 1:50-1:200, IF/ICC 1:100-1:500
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Concentration:	1 mg/mL
Buffer:	Rabbit IgG in phosphate buffered saline , pH 7.4, 150 mM NaCl, 0.02 % sodium azide and 50 %
	glycerol.
Preservative:	Sodium azide
Precaution of Use:	This product contains Sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which
	should be handled by trained staff only.
Storage:	-20 °C
Storage Comment:	Store at -20 °C.Stable for 12 months from date of receipt
Expiry Date:	12 months

#### Immunofluorescence (fixed cells)

**Image 2.** ABIN6269252 staining Hela by IF/ICC. The sample were fixed with PFA and permeabilized in 0.1% Triton X-100,then blocked in 10% serum for 45 minutes at 25°C. The primary antibody was diluted at 1/200 and incubated with the sample for 1 hour at 37°C. An Alexa Fluor 594 conjugated goat anti-rabbit IgG (H+L) Ab, diluted at 1/600, was used as the secondary antibody.
