anti-MYOC antibody (Internal Region)

2 Images

Overview 100 μL Quantity: Target: MYOC Binding Specificity: Internal Region Reactivity: Human, Mouse, Rat Host: Rabbit Clonality: Polyclonal Conjugate: This MYOC antibody is un-conjugated Western Blotting (WB), ELISA, Immunohistochemistry (IHC) Application: **Product Details** Immunogen: A synthesized peptide derived from human MYOC, corresponding to a region within the internal amino acids. Isotype: IgG Specificity: MYOC Antibody detects endogenous levels of total MYOC. Predicted Reactivity: Zebrafish, Bovine, Horse, Sheep, Rabbit, Dog, Xenopus The antiserum was purified by peptide affinity chromatography using SulfoLinkTM Coupling Purification: Resin (Thermo Fisher Scientific). **Target Details** MYOC Target:

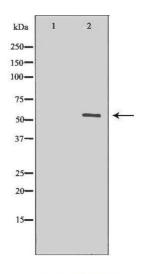

Target Details

| Alternative Name: | MYOC (MYOC Products) |
|---------------------|---|
| Background: | Description: Secreted glycoprotein regulating the activation of different signaling pathways in |
| | adjacent cells to control different processes including cell adhesion, cell-matrix adhesion, |
| | cytoskeleton organization and cell migration. Promotes substrate adhesion, spreading and |
| | formation of focal contacts. Negatively regulates cell-matrix adhesion and stress fiber |
| | assembly through Rho protein signal transduction. Modulates the organization of actin |
| | cytoskeleton by stimulating the formation of stress fibers through interactions with |
| | components of Wnt signaling pathways. Promotes cell migration through activation of PTK2 |
| | and the downstream phosphatidylinositol 3-kinase signaling. Plays a role in bone formation and |
| | promotes osteoblast differentiation in a dose-dependent manner through mitogen-activated |
| | protein kinase signaling. Mediates myelination in the peripheral nervous system through |
| | ERBB2/ERBB3 signaling. Plays a role as a regulator of muscle hypertrophy through the |
| | components of dystrophin-associated protein complex. Involved in positive regulation of |
| | mitochondrial depolarization. Plays a role in neurite outgrowth. May participate in the |
| | obstruction of fluid outflow in the trabecular meshwork. |
| | Gene: MYOC |
| Molecular Weight: | 57kDa |
| Gene ID: | 4653 |
| UniProt: | Q99972 |
| Application Details | |
| Application Notes: | WB 1:500-1:2000, IHC 1:50-1:200, ELISA(peptide) 1:20000-1:40000 |
| Restrictions: | For Research Use only |
| Handling | |
| Format: | Liquid |
| Concentration: | 1 mg/mL |
| Buffer: | Rabbit IgG in phosphate buffered saline , pH 7.4, 150 mM NaCl, 0.02 % sodium azide and 50 % |
| | glycerol. |
| Preservative: | Sodium azide |
| Precaution of Use: | This product contains Sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which |
| | should be handled by trained staff only. |

Handling

| Storage: | -20 °C |
|------------------|---|
| Storage Comment: | Store at -20 °C. Stable for 12 months from date of receipt. |
| Expiry Date: | 12 months |

Western Blotting

Image 1. Western blot analysis of extracts of human heart tissue, using MYOC antibody. The lane on the left is treated with the antigen-specific peptide.

Immunohistochemistry

Image 2. ABIN6276746 at 1/100 staining Mouse muscle tissue by IHC-P. The sample was formaldehyde fixed and a heat mediated antigen retrieval step in citrate buffer was performed. The sample was then blocked and incubated with the antibody for 1.5 hours at $22_i\tilde{a}C$. An HRP conjugated goat anti-rabbit antibody was used as the secondary
