Alternative Name:	RBX1 (RBX1 Products)
Background:	Description: E3 ubiquitin ligase component of multiple cullin-RING-based E3 ubiquitin-protein
	ligase (CRLs) complexes which mediate the ubiquitination and subsequent proteasomal
	degradation of target proteins, including proteins involved in cell cycle progression, signal
	transduction, transcription and transcription-coupled nucleotide excision repair. CRLs
	complexes and ARIH1 collaborate in tandem to mediate ubiquitination of target proteins, ARIH
	mediating addition of the first ubiquitin on CRLs targets (PubMed:27565346). The functional
	specificity of the E3 ubiquitin-protein ligase complexes depends on the variable substrate
	recognition components. As a component of the CSA complex promotes the ubiquitination of
	ERCC6 resulting in proteasomal degradation. Through the RING-type zinc finger, seems to
	recruit the E2 ubiquitination enzyme, like CDC34, to the complex and brings it into close
	proximity to the substrate. Probably also stimulates CDC34 autoubiquitination. May be required
	for histone H3 and histone H4 ubiquitination in response to ultraviolet and for subsequent DNA
	repair. Promotes the neddylation of CUL1, CUL2, CUL4 and CUL4 via its interaction with
	UBE2M. Involved in the ubiquitination of KEAP1, ENC1 and KLHL41. In concert with ATF2 and
	CUL3, promotes degradation of KAT5 thereby attenuating its ability to acetylate and activate
	ATM.
