Target Details

Alternative Name:	SMARCA5 (SMARCA5 Products)
Background:	Description: Helicase that possesses intrinsic ATP-dependent nucleosome-remodeling activity.
	Complexes containing SMARCA5 are capable of forming ordered nucleosome arrays on
	chromatin, this may require intact histone H4 tails. Also required for replication of pericentric
	heterochromatin in S-phase specifically in conjunction with BAZ1A. Probably plays a role in
	repression of poll dependent transcription of the rDNA locus, through the recruitment of the
	SIN3/HDAC1 corepressor complex to the rDNA promoter. Essential component of the WICH
	complex, a chromatin remodeling complex that mobilizes nucleosomes and reconfigures
	irregular chromatin to a regular nucleosomal array structure. The WICH complex regulates the
	transcription of various genes, has a role in RNA polymerase I and RNA polymerase III
	transcription, mediates the histone H2AX phosphorylation at 'Tyr-142', and is involved in the
	maintenance of chromatin structures during DNA replication processes. Essential component
	of the NoRC (nucleolar remodeling complex) complex, a complex that mediates silencing of a
	fraction of rDNA by recruiting histone-modifying enzymes and DNA methyltransferases, leading
	to heterochromatin formation and transcriptional silencing.

Immunohistochemistry

Image 1. ABIN6277007 at 1/100 staining Human breast cancer tissue by IHC-P. The sample was formaldehyde fixed and a heat mediated antigen retrieval step in citrate buffer was performed. The sample was then blocked and incubated with the antibody for 1.5 hours at 22¡ãC. An HRP conjugated goat anti-rabbit antibody was used as the secondary

Western Blotting
