Target Details

Target:	DAZAP1
Alternative Name:	DAZAP1 (DAZAP1 Products)
Background:	In mammals, the Y chromosome directs the development of the testes and plays an important role in spermatogenesis. A high percentage of infertile men have deletions that map to regions of the Y chromosome. The DAZ (deleted in azoospermia) gene cluster maps to the AZFc region

Target Details

of the Y chromosome and is deleted in many azoospermic and severely oligospermic men. It is thought that the DAZ gene cluster arose from the transposition, amplification, and pruning of the ancestral autosomal gene DAZL also involved in germ cell development and gametogenesis.

Molecular Weight: 45 kDa (MW of target protein)

Application Details

Application Notes: WB: 1.25 µg/mL, IHC: 4-8 µg/mL
Optimal conditions should be determined by the investigator.

Comment: DAZAP1 Blocking Peptide, catalog no. 33R-4764, is also available for use as a blocking control in assays to test for specificity of this DAZAP1 antibody
