Ephrin B2 IQ-ELISA Kit

\sim			
	N/F	ا/\r14	$\triangle W$

Quantity:	96 tests
Target:	Ephrin B2 (EFNB2)
Reactivity:	Zebrafish (Danio rerio)
Method Type:	Sandwich ELISA
Application:	ELISA
Product Details	
Purpose:	Zebrafish Immunoquantitative (PCR-Based) Ephrin-B2 ELISA Kit for cell culture supernatants,
	plasma, and serum samples.
Sample Type:	Cell Culture Supernatant, Plasma, Serum
Analytical Method:	Semi-Quantitative
Detection Method:	qPCR
Characteristics:	IQ-ELISAs employ specific capture antibodies coated on a 96-well PCR plate. Standards and samples are pipetted into the wells, the target protein in the standards and samples binds to
	the immobilized antibody. The wells are washed and the detection affinity reagent is added to
	the wells where it binds to any captured antigen. The wells are washed, and primers and PCR
	master mix are added to each well. The plate is placed into a real time PCR instrument for
	cycling and measurement of DNA amplification. The cycle number where amplification is
	detected is proportional to the amount of affinity detection reagent that bound to captured antigen in each well.

Application Notes:	The Immuno-Quantitative ELISA (IQELISA) kits are an innovative assay platform that combines the specificity and ease of use of an ELISA with the sensitivity of real-time PCR. This results in an assay that is simultaneously familiar and cutting edge and enables the use of only 1/10th the sample volume while also providing 10x more sensitivity than a traditional ELISA.

Application Details

	called immuno-PCR, this detection platform results in an assay that is simultaneously familia
	and cutting edge. Compared to traditional ELISA, IQELISA™ enables the use of only 1/10th the
	sample volume while also providing 10x more sensitivity.
Sample Volume:	25 μL
Plate:	Pre-coated
Protocol:	1. Prepare all reagents, samples and standards as instructed
	2. Add 25 μL standard or sample to each well. Incubate for 2.5 hours at room temperature or overnight at 4 $^{\circ}C$
	3. Add 25 µL detection affinity reagent to each well. Incubate 1 hour at room temperature
