# Datasheet for ABIN6384944 **TYRO3 IQ-ELISA Kit**

## Overview

Quantity:	96 tests
Target:	TYR03
Reactivity:	Horse
Method Type:	Sandwich ELISA
Application:	ELISA
Product Details	
Purpose:	Equine Immunoquantitative (PCR-Based) Dtk ELISA Kit for cell culture supernatants, plasma,
	and serum samples.
Sample Type:	Cell Culture Supernatant, Plasma, Serum
Analytical Method:	Semi-Quantitative
Detection Method:	qPCR
Characteristics:	IQ-ELISAs employ specific capture antibodies coated on a 96-well PCR plate. Standards and
	samples are pipetted into the wells, the target protein in the standards and samples binds to
	the immobilized antibody. The wells are washed and the detection affinity reagent is added to
	the wells where it binds to any captured antigen. The wells are washed, and primers and PCR
	master mix are added to each well. The plate is placed into a real time PCR instrument for
	cycling and measurement of DNA amplification. The cycle number where amplification is
	detected is proportional to the amount of affinity detection reagent that bound to captured

antigen in each well.

Components:

• Dtk Microplate (Item A): 96 well PCR plate coated with anti-Equine Dtk

### Application Details

Application Notes:	The Immuno-Quantitative ELISA (IQELISA) kits are an innovative assay platform that combines
	the specificity and ease of use of an ELISA with the sensitivity of real-time PCR. This results in
	an assay that is simultaneously familiar and cutting edge and enables the use of only 1/10th
	the sample volume while also providing 10x more sensitivity than a traditional ELISA.
