## Datasheet for ABIN6384994 Thrombospondin 2 IQ-ELISA Kit

Overview	
Quantity:	96 tests
Target:	Thrombospondin 2 (THBS2)
Reactivity:	Rabbit
Method Type:	Sandwich ELISA
Application:	ELISA
Product Details	
Purpose:	Rabbit Immunoquantitative (PCR-Based) Thrombospondin-2 ELISA Kit for cell culture
	supernatants, plasma, and serum samples.
Sample Type:	Cell Culture Supernatant, Plasma, Serum
Analytical Method:	Semi-Quantitative
Detection Method:	qPCR
Characteristics:	IQ-ELISAs employ specific capture antibodies coated on a 96-well PCR plate. Standards and samples are pipetted into the wells, the target protein in the standards and samples binds to the immobilized antibody. The wells are washed and the detection affinity reagent is added to the wells where it binds to any captured antigen. The wells are washed, and primers and PCR master mix are added to each well. The plate is placed into a real time PCR instrument for cycling and measurement of DNA amplification. The cycle number where amplification is detected is proportional to the amount of affinity detection reagent that bound to captured antigen in each well.
Components:	Thrombospondin-2 Microplate (Item A): 96 well PCR plate coated with anti-Rabbit

## Application Details

Application Notes:	The Immuno-Quantitative ELISA (IQELISA) kits are an innovative assay platform that combines
	the specificity and ease of use of an ELISA with the sensitivity of real-time PCR. This results in
	an assay that is simultaneously familiar and cutting edge and enables the use of only 1/10th
	the sample volume while also providing 10x more sensitivity than a traditional ELISA.
Comment:	The Immuno-Quantitative ELISA (IQELISA™) kits are an innovative assay platform that
