Overview

Quantity:	96 tests
Target:	CDKN1B
Reactivity:	Mouse
Method Type:	Sandwich ELISA
Application:	ELISA

Product Details

Purpose:	Mouse Immunoquantitative (PCR-Based) p27/Kip1 ELISA Kit for cell culture supernatants, plasma, and serum samples.
Sample Type:	Cell Culture Supernatant, Plasma, Serum
Analytical Method:	Semi-Quantitative
Detection Method:	qPCR
Characteristics:	IQ-ELISAs employ specific capture antibodies coated on a 96-well PCR plate. Standards and samples are pipetted into the wells, the target protein in the standards and samples binds to the immobilized antibody. The wells are washed and the detection affinity reagent is added to the wells where it binds to any captured antigen. The wells are washed, and primers and PCR master mix are added to each well. The plate is placed into a real time PCR instrument for cycling and measurement of DNA amplification. The cycle number where amplification is detected is proportional to the amount of affinity detection reagent that bound to captured antigen in each well.
Components:	• p27/Kip1 Microplate (Item A): 96 well PCR plate coated with anti-Mouse p27/Kip1

Comment:	The Immuno-Quantitative ELISA (IQELISA™) kits are an innovative assay platform that combines the specificity and ease of use of an ELISA with the sensitivity of real-time PCR. Also called immuno-PCR, this detection platform results in an assay that is simultaneously familiar and cutting edge. Compared to traditional ELISA, IQELISA™ enables the use of only 1/10th the sample volume while also providing 10x more sensitivity.
Sample Volume:	25 µL
Plate:	Pre-coated
Protocol:	1. Prepare all reagents, samples and standards as instructed 2. Add 25 µL standard or sample to each well. Incubate for 2.5 hours at room temperature or overnight at 4˚C 3. Add 25 µL detection affinity reagent to each well. Incubate 1 hour at room temperature 4. Add 25µL of IQELISA Detection Reagent to each well. Incubate 1 hour 5. Add 15µL Primer solution 10µL of PCR master mix to each well 6. Run real-time PCR
