Datasheet for ABIN6385375
CD226 IQ-ELISA Kit

Go to Product page

## Overview

| Quantity: | 96 tests |
| :--- | :--- |
| Target: | CD226 |
| Reactivity: | Human |
| Method Type: | Sandwich ELISA |
| Application: | ELISA |

Product Details

| Purpose: | Human Immunoquantitative (PCR-Based) DNAM-1 ELISA Kit for cell culture supernatants, <br> plasma, and serum samples. |
| :--- | :--- |
| Sample Type: | Cell Culture Supernatant, Plasma, Serum |
| Analytical Method: | Semi-Quantitative |
| Detection Method: | qPCR |
| Sensitivity: | 0.5 ng/mL |
| Characteristics: | IQ-ELISAs employ specific capture antibodies coated on a 96-well PCR plate. Standards and <br> samples are pipetted into the wells, the target protein in the standards and samples binds to <br> the immobilized antibody. The wells are washed and the detection affinity reagent is added to <br> the wells where it binds to any captured antigen. The wells are washed, and primers and PCR <br> master mix are added to each well. The plate is placed into a real time PCR instrument for |
| cycling and measurement of DNA amplification. The cycle number where amplification is <br> detected is proportional to the amount of affinity detection reagent that bound to captured <br> antigen in each well. |  |

- DNAM-1 Microplate (Item A): 96 well PCR plate coated with anti-Human DNAM-1
- Wash Buffer I Concentrate (20x) (Item B): 25 ml of $20 x$ concentrated solution
- Standards (Item C): 2 vials of recombinant Human DNAM-1
- Assay Diluent A (Item D): 30 ml diluent buffer, $0.09 \%$ sodium azide as preservative. For Standard/Sample (serum/plasma) diluent
- Assay Diluent B (Item E): 15 ml of 5 x concentrated buffer. For Standard/Sample (cell culture medium/urine) diluent
- Detection Affinity Reagent for DNAM-1 (Item F): 2 vials of a $4 x$ concentrated solution of antiHuman DNAM-1 affinity reagent
- IQELISA Detection Reagent (Item G): 1.4ml of a 10x concentrated stock
- Primer Solution (Item I): 1.7 ml vial
- PCR Master Mix (Item J): 1.2 ml vial
- PCR Preparation buffer (Item K ): 1 ml vial of 10 x concentrated buffer
- Final Wash Buffer (Item L): 10ml vial of 10x concentrated buffer

Material not included: • Real-time PCR instrument, Bio-Rad recommended

- Precision pipettes to deliver $2 \mu \mathrm{~L}$ to 1 mL volumes
- Adjustable 1-25 mL pipettes for reagent preparation
- 100 mL and 1 liter graduated cylinders
- Absorbent paper
- Distilled or deionized water
- Log-log graph paper or computer and software for data analysis
- Tubes to prepare standard or sample dilutions
- Heating block or water bath capable of $80^{\circ} \mathrm{C}$

## Target Details

| Target: | CD226 |
| :--- | :--- |
| Alternative Name: | DNAM-1 (CD226 Products) |
| Gene ID: | Q15762 |
| UniProt: | Regulation of Leukocyte Mediated Immunity, Positive Regulation of Immune Effector Process, <br> Cancer Immune Checkpoints |
| Application Details | The Immuno-Quantitative ELISA (IQELISA) kits are an innovative assay platform that combines <br> the specificity and ease of use of an ELISA with the sensitivity of real-time PCR. This results in |
| Application Notes: | an assay that is simultaneously familiar and cutting edge and enables the use of only $1 / 10$ th <br> the sample volume while also providing 10x more sensitivity than a traditional ELISA. |

## Application Details

| Comment: | The Immuno-Quantitative ELISA (IQELISA ${ }^{\text {TM }}$ ) kits are an innovative assay platform that combines the specificity and ease of use of an ELISA with the sensitivity of real-time PCR. Also called immuno-PCR, this detection platform results in an assay that is simultaneously familiar and cutting edge. Compared to traditional ELISA, IQELISA ${ }^{\text {TM }}$ enables the use of only $1 / 10$ th the sample volume while also providing 10x more sensitivity. |
| :---: | :---: |
| Sample Volume: | $25 \mu \mathrm{~L}$ |
| Plate: | Pre-coated |
| Protocol: | 1. Prepare all reagents, samples and standards as instructed <br> 2. Add $25 \mu \mathrm{~L}$ standard or sample to each well. Incubate for 2.5 hours at room temperature or overnight at $4^{\circ} \mathrm{C}$ <br> 3. Add $25 \mu \mathrm{~L}$ detection affinity reagent to each well. Incubate 1 hour at room temperature <br> 4. Add $25 \mu \mathrm{~L}$ of IQELISA Detection Reagent to each well. Incubate 1 hour <br> 5. Add $15 \mu \mathrm{~L}$ Primer solution $10 \mu \mathrm{~L}$ of PCR master mix to each well <br> 6. Run real-time PCR |
| Restrictions: <br> Handling | For Research Use only |
| Storage: | $4^{\circ} \mathrm{C},-20^{\circ} \mathrm{C},-80^{\circ} \mathrm{C}$ |
| Storage Comment: | May be stored for up to 6 months at $2^{\circ}$ to $8^{\circ} \mathrm{C}$ from the date of shipment. Standard (recombinant protein) should be stored at $-20^{\circ} \mathrm{C}$ or $-80^{\circ} \mathrm{C}$ (recommended at $-80^{\circ} \mathrm{C}$ ) after reconstitution. Opened PCR plate or reagents may be stored for up to 1 month at $2^{\circ}$ to $8^{\circ} \mathrm{C}$. Note: the kit can be used within one year if the whole kit is stored at $-20^{\circ} \mathrm{C}$. Avoid repeated freeze-thaw cycles. |
| Expiry Date: | 6 months |
