### Target Details

| that triggers the perception of a smell. The olfactory receptor proteins are members of a large |
|---|
| family of G-protein-coupled receptors (GPCR) arising from single coding-exon genes. Olfactory   |
| receptors share a 7-transmembrane domain structure with many neurotransmitter and               |
| hormone receptors and are responsible for the recognition and G protein-mediated                |
| transduction of odorant signals. The olfactory receptor gene family is the largest in the       |
| genome. The nomenclature assigned to the olfactory receptor genes and proteins for this         |
| organism is independent of other organisms.   |
