Target Details

Target:	CD20 (MS4A1)	
Alternative Name:	CD20 (MS4A1 Products)	
Background:	Synonyms: B-lymphocyte antigen CD20, B-lymphocyte surface antigen B1, Bp35, Leukocyte	
	surface antigen Leu-16, Membrane-spanning 4-domains subfamily A member 1, CD20	
	Background: CD20 is a 33-37 kD, four transmembrane spanning protein, also known as B1 and	
	Bp35. CD20 is expressed on pre-B-cells, resting and activated B cells (not plasma cells), some	
	follicular dendritic cells, and at low levels on a T cell subset. CD20 is heavily phosphorylated on	
	activated B cells and malignant B cells. Homo-oligomeric complexes of CD20 are thought to	
	form Ca2+ conductive ion channels in the plasma membrane of B cells. The CD20 Molecule is	
	involved in B-cell activation and is associated with various Src family kinases (Lyn, Lck, Fyn). It	
	exists in a complex with MHC class I and II, CD53, CD81, and CD82.	
	Gene Name: MS4A1	
Gene ID:	931	
NCBI Accession:	NP_068769	
UniProt:	P11836	
Application Details		
Application Notes:	Immunoprecipitation_Dilution: User Optimized	
	Immunohistochemistry_Dilution: User Optimized	
	Flow_Cytometry_Dilution: 5 μL/1x10e6 cells or 100μL of whole blood	
Comment:	Anti-CD20 is tested for Flow Cytometry and useful in Immunoprecipitation and	
	Immunohistochemistry. Researchers should determine optimal titers for applications that are	
	not stated.
