Target	Details

Target:	PCDHGA1
Alternative Name:	Pcdhga1 (PCDHGA1 Products)
Background:	Synonyms: PCDH, Protocadherin Gamma antibody, PCDH gamma antibody, PCDH-gamma,
	PCDHG, Protocadherin gamma , Protocadherin gamma, Gamma Protocadherin (pan), Pan-
	Gamma-Protocadherin, Pan Gamma Protocadherin
	Background: The protocadherin gamma gene cluster is one of three related clusters tandemly
	linked on chromosome five. These gene clusters have an immunoglobulin-like organization,
	suggesting that a novel mechanism may be involved in their regulation and expression. The
	gamma gene cluster includes 22 genes divided into 3 subfamilies. Subfamily A contains 12
	genes, subfamily B contains 7 genes and 2 pseudogenes, and the more distantly related
	subfamily C contains 3 genes. The tandem array of 22 large, variable region exons are followed
	by a constant region, containing 3 exons shared by all genes in the cluster. Each variable regior
	exon encodes the extracellular region, which includes 6 cadherin ectodomains and a
	transmembrane region. The constant region exons encode the common cytoplasmic region.
	These neural cadherin-like cell adhesion proteins most likely play a critical role in the
	establishment and function of specific cell-cell connections in the brain. Alternative splicing ha
	been described for the gamma cluster genes. Anti-Protocadherin Gamma (pan) is ideal for
	research in Neuroscience, Cell Adhesion and Cell Signaling.
	Gene Name: Protocadherin-Gamma-A1
Gene ID:	93709
JniProt:	Q91XZ0
Application Details	
Application Notes:	ELISA_Dilution: 1:10,000
	Western_Blot_Dilution: 1:1000
	Other: ICC/IF: 1:100
Comment:	Anti-Protocadherin Gamma (pan) Antibody is tested for Western Blots and
	Immunocytochemistry. Expect a band approximately ~100 kDa on specific lysates or tissues. I
	will cross react with all Gamma-protocadherins -A, -B, and -C. Specific conditions for reactivity
	should be optimized by the end user.
Restrictions:	For Research Use only
