### Target Details

Background:	Synonyms: hDx-1, E3 ubiquitin-protein ligase DTX1, Protein deltex-1, Deltex1, hDTX1, DTX1				
	Background: Functions as a ubiquitin ligase protein in vivo, mediating ubiquitination and				
	promoting degradation of MEKK1, suggesting that it may regulate the Notch pathway via some				
	ubiquitin ligase activity (By similarity). Regulator of Notch signaling, a signaling pathway				
	involved in cell-cell communications that regulates a broad spectrum of cell-fate				
	determinations. Mainly acts as a positive regulator of Notch, but it also acts as a negative				
regulator, depending on the developmental and cell context. Mediates the antineura Notch, possibly by inhibiting the transcriptional activation mediated by MATCH1. Ir neurogenesis, lymphogenesis and myogenesis, and may also be involved in MZB (I					
					zone B) cell differentiation. Promotes B-cell development at the expense of T-cell development,
					suggesting that it can antagonize NOTCH1.
Gene ID:	1840				
UniProt:	Q86Y01				

Pathways: Notch Signaling
