Target Details

| Target: | lgG | |
|---------------------|--|--|
| Abstract: | IgG Products | |
| Target Type: | Antibody | |
| Background: | Secreted as part of the adaptive immune response by plasma B cells, immunoglobulin G | |
| | constitutes 75 % of serum immunoglobulins. Immunoglobulin G binds to viruses, bacteria, as | |
| | well as fungi and facilitates their destruction or neutralization via agglutination (and thereby | |
| | immobilizing them), activation of the compliment cascade, and opsonization for phagocytosis. | |
| | The whole IgG molecule possesses both the $F(c)$ region, recognized by high-affinity Fc recepto | |
| | proteins, as well as the F(ab) region possessing the epitope-recognition site. Both heavy and | |
| | light chains of the antibody molecule are present. Secondary Antibodies are available in a | |
| | variety of formats and conjugate types. When choosing a secondary antibody product, | |
| | consideration must be given to species and immunoglobulin specificity, conjugate type, | |
| | fragment and chain specificity, level of cross-reactivity, and host-species source and fragment | |
| | composition. This Anti-Rabbit IgG (H&L) is conjugated to DyLight™649. | |

| Comment: | Anti-Rabbit IgG Antibody DyLight™649 has been tested by dot blot and is designed for | |
| | immunofluorescence microscopy, fluorescence based plate assays (FLISA) and fluorescent | |
| | western blotting. This product is also suitable for multiplex analysis, including multicolor | |
| | imaging, utilizing various commercial platforms. The emission spectra for this DyLight $^{\scriptscriptstyle M}$ | |
| | conjugate match the principle output wavelengths of most common fluorescence | |
| | instrumentation. | |
