### Product Details

CD134 is the primary receptor for feline immunodeficiency virus. CD134 expression can		
promote viral binding and renders cells permissive for viral entry, productive infection, and		
syncytium formation. Stimulating the receptor can improve the response to a powerful virus		
vector and may be useful in vaccine development.		
Gene Name: TNFRSF4		
Production: Natural and recombinant mouse TNFRSF4. There is no detectable cross-reactivity		
with other relevant proteins.		
Standard: Expression system for standard: NSO, Immunogen sequence: V20-P211
