VEGF produced by tumor cells potently stimulates endothelial cell proliferation and angiogenesis and plays a key role in the pathophysiology of several neoplasias. VEGF may also play a pivotal role in mediating the development and progression of diabetic retinopathy. VEGF, a major regulator of angiogenesis,

fluorescence in situ hybridization to chromosome 6p12. The standard product used in this kit is
recombinant mouse VEGF164, a 42KDa dimer.
Gene Name: VEGFA
Production: This kit recognizes both the 164 and 120 amino acid residue forms of mouse
VEGF. There is no detectable cross-reactivity with other relevant proteins.
Standard: Expression system for standard: sf21, Immunogen sequence: A27-R190
