This gene is mapped to 1p36.33. This gene encodes a member of the TNF-receptor superfamily. The encoded receptor has been shown to have increased expression upon T-cell activation, and it is thought to play a key role in dominant immunological self-tolerance maintained by CD25(+)CD4(+) regulatory T cells. Knockout studies in mice also suggest the role of this

Three alternatively spliced transcript variants of this gene encoding distinct isoforms have been reported. Gene Name: TNFRSF18 Production: Natural and recombinant mouse TNFRSF18. There is no detectable cross-reactivity with other relevant proteins. Standard: Expression system for standard: NSO, Immunogen sequence: S22-H153
