#### Overview

Quantity:	96 tests	
Target:	CEA	
Reactivity:	Mouse	
Method Type:	Sandwich ELISA	
Detection Range:	31.2 pg/mL - 2000 pg/mL	
Minimum Detection Limit:	31.2 pg/mL	
Application:	ELISA	
Product Details		
Purpose:	The kit is a sandwich enzyme immunoassay for in vitro quantitative measurement of CEA in	
	mouse serum, plasma, tissue homogenates, cell lysates, cell culture supernates.	
	We offer <b>validation data</b> (WB) <b>for the kit components</b> . So you can be sure to order a reliable	
	ELISA kit product composed of high quality reagents.	
Sample Type:	Cell Culture Supernatant, Cell Lysate, Plasma, Serum, Tissue Homogenate	
Analytical Method:	Quantitative	
Detection Method:	Colorimetric	
Specificity:	This assay has high sensitivity and excellent specificity for detection of Carcinoembryonic	
	Antigen (CEA)	
Cross-Reactivity (Details):	No significant cross-reactivity or interference between Carcinoembryonic Antigen (CEA) and	
	analogues was observed.

#### Product Details

Sensitivity:	12.9 pg/mL		
Components:	Pre-coated, ready to use 96-well strip plate, flat buttom		
	Plate sealer for 96 wells		
	Reference Standard		
	Standard Diluent		
	Detection Reagent A		
	Detection Reagent B		
	Assay Diluent A		
	Assay Diluent B		
	Reagent Diluent (if Detection Reagent is lyophilized)		
	TMB Substrate		
	Stop Solution		
	• Wash Buffer (30 x concentrate)		
	Instruction manual		

# Target Details

Target:	CEA		
Alternative Name:	Carcinoembryonic Antigen (CEA) (CEA Products)		
UniProt:	Q3UKK2		

### Application Details

Comment:	Information on standard material:
	The standard might be recombinant protein or natural protein, that will depend on the specific
	kit. Moreover, the expression system is E.coli or yeast or mammal cell. There is 0.05% proclin
	300 in the standard as preservative.
	Information on reagents:
	The stop solution used in the kit is sulfuric acid with concentration of 1 mol/L. And the wash
	solution is TBS. The standard diluent contains 0.02 % sodium azide, assay diluent A and assay
	diluent B contain 0.01% sodium azide. Some kits can contain is BSA in them.
	Information on antibodies:
	The provided antibodies and their host vary in different kits.
Sample Volume:	100 µL
Assay Time:	3 h

## Application Details

Plate:	Pre-coated		
Protocol:	1. Prepare all reagents, samples and standards,		
	2. Add 100 $\mu$ L standard or sample to each well. Incubate 1 hours at 37 °C,		
	3. Aspirate and add 100 $\mu$ L prepared Detection Reagent A. Incubate 1 hour at 37 °C,		
	4. Aspirate and wash 3 times,		
	5. Add 100µL prepared Detection Reagent B. Incubate 30 minutes at 37 °C,		
	6. Aspirate and wash 5 times,		
	7. Add 90µL Substrate Solution. Incubate 10-20 minutes at 37 °C,		
	8. Add 50µL Stop Solution. Read at 450nm immediately.		
Reagent Preparation:	1. Bring all kit components and samples to room temperature (18-25 °C) before use.		
	2. Standard - Reconstitute the Standard with 0.5 mL of Standard Diluent, keep for 10 minutes at		
	room temperature, shake gently (not to foam). The concentration of the standard in the stock		
	solution is 2,000pg/mL. Prepare 7 tubes containing 0.25 mL Standard Diluent and produce a		
	double dilution series. Mix each tube thoroughly before the next transfer. Set up 7 points of		
	diluted standard such as 2,000pg/mL, 1,000pg/mL, 500pg/mL, 250pg/mL, 125pg/mL,		
	62.5pg/mL, 31.2pg/mL, and the last microcentrifuge tube with Standard Diluent is the blank		
	as Opg/mL.		
	3. Detection Reagent A and Detection Reagent B - Briefly spin or centrifuge the stock Detection		
	A and Detection B before use. Dilute to the working concentration with Assay Diluent A and B		
	respectively (1:100).		
	4. Wash Solution - Dilute 20 mL of Wash Solution concentrate (30x) with 580 mL of deionized		
	or distilled water to prepare 600 mL of Wash Solution (1x).		
	5. TMB substrate - Aspirate the needed dosage of the solution with sterilized tips and do not		
	dump the residual solution into the vial again.		
	Note:		
	1. Making serial dilution in the wells directly is not permitted.		
	<ol> <li>Prepare standard within 15 minutes before assay. Please do not dissolve the reagents at 37 °C directly.</li> </ol>		
	3. Please carefully reconstitute Standards or working Detection Reagent A and B according to		
	the instruction, and avoid foaming and mix gently until the crystals are completely dissolved.		
	To minimize imprecision caused by pipetting, use small volumes and ensure that pipettors		
	are calibrated. It is recommended to suck more than 10µL for once pipetting.		
	4. The reconstituted Standards, Detection Reagent A and Detection Reagent B can be used only		
	once.		
	5. If crystals have formed in the Wash Solution concentrate (30x), warm to room temperature		
	and mix gently until the crystals are completely dissolved.		
	6. Contaminated water or container for reagent preparation will influence the detection result.		
Sample Preparation:	It is recommended to use fresh samples without long storage, otherwise protein degradation		
· ·	and denaturationmay occur in these samples, leading to false results. Samples should		
	therefore be stored for a short periodat 2 - 8 °C or aliquoted at -20 °C (≤1 month) or -80 °C (≤

	<ul> <li>3 months). Repeated freeze-thawcycles should be avoided. Prior to assay, the frozen samples should be slowly thawed and centrifuged toremove precipitates.</li> <li>If the sample type is not specified in the instructions, a preliminary test is necessary to determinecompatibility with the kit.</li> <li>If a lysis buffer is used to prepare tissue homogenates or cell culture supernatant, there is a possibility of causing a deviation due to the introduced chemical substance. The recommended dilution factor is for reference only.</li> <li>Please estimate the concentration of the samples before performing the test. If the values are not in therange of the standard curve, the optimal sample dilution for the particular experiment has to be determined. Samples should then be diluted with PBS (pH =7.0-7.2).</li> </ul>	
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level of	
	target were tested 20 times on one plate, respectively.	
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level of	
	target were tested on 3 different plates, 8 replicates in each plate.	
	CV(%) = SD/meanX100	
	Intra-Assay: CV < 10%	
	Inter-Assay: CV < 12%	
Restrictions:	For Research Use only
