Target Details

Target:	HMOX2
Alternative Name:	HO-2 (HMOX2 Products)
Background:	Synonyms: HO-2, Heme oxygenase 2, HMOX2, HO2

Target Details

Background: Heme oxygenase cleaves the heme ring at the alpha methene bridge to form biliverdin. Biliverdin is subsequently converted to bilirubin by biliverdin reductase. Under physiological conditions, the activity of heme oxygenase is highest in the spleen, where senescent erythrocytes are sequestered and destroyed. Heme oxygenase 2 could be implicated in the production of carbon monoxide in brain where it could act as a neurotransmitter.
