Background:	Synonyms: Pleckstrin homology domain-containing family O member 1, PH domain-containing	
	family O member 1, C-Jun-binding protein, JBP, Casein kinase 2-interacting protein 1, CK2-	
	interacting protein 1, CKIP-1, Osteoclast maturation-associated gene 120 protein, PLEKHO1,	
	CKIP1, OC120, HQ0024C	
	Background: Plays a role in the regulation of the actin cytoskeleton through its interactions with	
	actin capping protein (CP). May function to target CK2 to the plasma membrane thereby	
	serving as an adapter to facilitate the phosphorylation of CP by protein kinase 2 (CK2). Appears	
	to target ATM to the plasma membrane. Appears to also inhibit tumor cell growth by inhibiting	
	AKT-mediated cell-survival. Also implicated in PI3K-regulated muscle differentiation, the	
	regulation of AP-1 activity (plasma membrane bound AP-1 regulator that translocates to the	
	nucleus) and the promotion of apoptosis induced by tumor necrosis factor TNF. When bound	
	to PKB, it inhibits it probably by decreasing PKB level of phosphorylation.
