# Datasheet for ABIN678098 anti-PKD2 antibody (AA 651-750)

Image

#### Overview

| Quantity:            | 100 µL  |
|----------------------|---|
| Target:              | PKD2  |
| Binding Specificity: | AA 651-750  |
| Reactivity:          | Human, Mouse  |
| Host:                | Rabbit  |
| Clonality:           | Polyclonal  |
| Conjugate:           | This PKD2 antibody is un-conjugated   |
| Application:         | ELISA, Immunohistochemistry (Paraffin-embedded Sections) (IHC (p)), Immunofluorescence<br>(Cultured Cells) (IF (cc)), Immunofluorescence (Paraffin-embedded Sections) (IF (p)),<br>Immunohistochemistry (Frozen Sections) (IHC (fro)) |

# Product Details

| Immunogen:            | KLH conjugated synthetic peptide derived from human Polycystin 2  |
|-----------------------|---|
| Isotype:              | lgG   |
| Specificity:          | This antibody may have a minor secondary cross-reactivity towards Polycystin 2-like protein 1 due to a 71 % non-contiguous sequence similarity in the immunogen sequence. |
| Cross-Reactivity:     | Human, Mouse  |
| Predicted Reactivity: | Rat,Dog,Cow,Chicken   |
| Purification:         | Purified by Protein A.  |

## Target Details

| PKD2  |
|---|
| Polycystin 2 (PKD2 Products)  |
| Synonyms: PC2, PKD4, Pc-2, APKD2, TRPP2, Polycystin-2, Autosomal dominant polycystic                  |
| kidney disease type II protein, Polycystic kidney disease 2 protein, Polycystwin, R48321,             |
| Transient receptor potential cation channel subfamily P member 2, PKD2                                |
| Background: Functions as a calcium permeable cation channel involved in fluid-flow                    |
| mechanosensation by the primary cilium in renal epithelium. Together with TRPV4, forms                |
| mechano- and thermosensitive channels in cilium (PubMed:18695040). PKD1 and PKD2 may                  |
| function through a common signaling pathway that is necessary for normal tubulogenesis.               |
| Acts as a regulator of cilium length, together with PKD1. The dynamic control of cilium length is     |
| essential in the regulation of mechanotransductive signaling. The cilium length response              |
| creates a negative feedback loop whereby fluid shear-mediated deflection of the primary cilium,       |
| which decreases intracellular cAMP, leads to cilium shortening and thus decreases flow-               |
| induced signaling. Also involved in left/right axis specification downstream of nodal flow: forms     |
| a complex with PKD1L1 in cilia to facilitate flow detection in left/right patterning (By similarity). |
| 5311  |
| Q13563  |
| cAMP Metabolic Process, Maintenance of Protein Location, Negative Regulation of Transporter           |
|   |

# Application Details

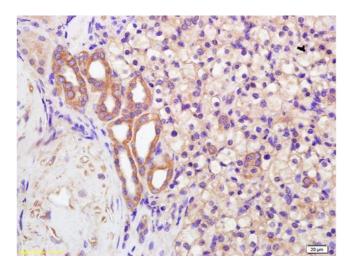

| Application Notes: | ELISA 1:500-1000      |
|--------------------|-----------------------|
|                    | IHC-P 1:200-400       |
|                    | IHC-F 1:100-500       |
|                    | IF(IHC-P) 1:50-200    |
|                    | IF(IHC-F) 1:50-200    |
|                    | IF(ICC) 1:50-200      |
| Restrictions:      | For Research Use only |
| Handling           |                       |
| Format:            | Liquid                |
| Concentration:     | 1 μg/μL               |
|                    |                       |

## Handling

| Buffer:            | 0.01M TBS( pH 7.4) with 1 % BSA, 0.02 % Proclin300 and 50 % Glycerol.  |
|--------------------|--|
| Preservative:      | ProClin  |
| Precaution of Use: | This product contains ProClin: a POISONOUS AND HAZARDOUS SUBSTANCE, which should be handled by trained staff only. |
| Storage:           | 4 °C,-20 °C  |
| Storage Comment:   | Shipped at 4°C. Store at -20°C for one year. Avoid repeated freeze/thaw cycles.                                    |
| Expiry Date:       | 12 months  |
