Target Details

Background:	<p>Synonyms: 136 kDa double stranded RNA binding protein, Adar 1, ADAR, Adar1, Adenosine deaminase RNA specic 1, Adenosine deaminase RNA specic, Adenosine deaminase that act on RNA, AV242451, Double stranded RNA specific adenosine deaminase, Double-stranded RNA-specific editase Adar, Drada, Dsh, Dsrad, dsRNA adenosine deaminase, EC 3.5.4.-, G1P1, I 4, I4, i4 protein, Interferon induced protein 4, Interferon inducible protein 4, K88dsrbp, mZaADAR, p136, Pre-mRNA adenosine deaminase, RNA adenosine deaminase 1, RNA-editing deaminase 1, RNA-editing enzyme 1.</p> <p>Background: ADAR1 converts adenosine to inosine in dsRNA, which destabilizes the dsRNA helix. This activity is important for various functions like site-specific RNA editing of transcripts of the glutamate receptors and modifying viral RNA genomes (which may be responsible for hypermutation of certain negative-stranded viruses, e.g., measles virus). ADAR1 also binds to short interfering RNAs (siRNA) without editing them and suppresses siRNA-mediated RNA interference. This protein is ubiquitously expressed, with the highest levels being found in brain and lung.</p>
