| | Background: The protein encoded by this gene belongs to the CDK subfamily of the Ser/Thr |
| | protein kinase family. The CDK subfamily members are highly similar to the gene products of S. |
| | cerevisiae cdc28, and S. pombe cdc2, and are known to be essential for cell cycle progression. |
| | This kinase has been shown to play a role in cellular proliferation and its function is limited to |
| | cell cycle G2-M phase. Multiple transcript variants encoding different isoforms have been found |
| | for this gene. [provided by RefSeq]. |
