Target Details

Target:	ErbB2/Her2
Alternative Name:	Her2 (ErbB2/Her2 Products)
Background:	Human Epidermal growth factor Receptor 2 (HER2) is also called ERBB2, HER-2,HER-2 /neu,
	NEU, NGL, TKR1 and c-erb B2, and is a protein giving higher aggressiveness in breast cancers. It
	is a member of the ErbB protein family, more commonly known as the epidermal growth factor
	receptor family. HER2 is a cell membrane surface-bound receptor tyrosine kinase and is
	normally involved in the signal transduction pathways leading to cell growth and differentiation.

Target Details

	HER2 is thought to be an orphan receptor, with none of the EGF family of ligands able to
	activate it. Approximately 30 % of breast cancers have an amplification of the HER2 gene or
	overexpression of its protein product. Overexpression of this receptor in breast cancer is
	associated with increased disease recurrence and worse prognosis. HER2 appears to play roles
	in development, cancer, communication at the neuromuscular junction and regulation of cell
	growth and differentiation .
