## Overview

|              |                                                     |
|--------------|-----------------------------------------------------|
| Quantity:    | 100 µL                                              |
| Target:      | MSTN                                                |
| Reactivity:  | Human                                               |
| Host:        | Rabbit                                              |
| Clonality:   | Polyclonal                                          |
| Conjugate:   | This MSTN antibody is conjugated to Alexa Fluor 488 |
| Application: | Please inquire                                      |

## Product Details

|                   |                                                                |
|-------------------|----------------------------------------------------------------|
| Cross-Reactivity: | Human                                                          |
| Characteristics:  | Growth/differentiation factor 8 Polyclonal Conjugated Antibody |

## Target Details

|                   |                                                                   |
|-------------------|-------------------------------------------------------------------|
| Target:           | MSTN                                                              |
| Alternative Name: | Growth/differentiation factor 8 ( <a href="#">MSTN Products</a> ) |

## Application Details

|                    |                                                     |
|--------------------|-----------------------------------------------------|
| Application Notes: | AF488 conjugated: most applications: 1: 50 - 1: 250 |
| Restrictions:      | For Research Use only                               |

Handling

---

|                  |                            |
|------------------|----------------------------|
| Storage:         | 4 °C                       |
| Storage Comment: | Store at 4°C for 6 months. |
