## Overview

|              |                                                    |
|--------------|----------------------------------------------------|
| Quantity:    | 100 µL                                             |
| Target:      | AMH                                                |
| Reactivity:  | Mouse                                              |
| Host:        | Rabbit                                             |
| Clonality:   | Polyclonal                                         |
| Conjugate:   | This AMH antibody is conjugated to Alexa Fluor 488 |
| Application: | Please inquire                                     |

## Product Details

|                   |                                                             |
|-------------------|-------------------------------------------------------------|
| Cross-Reactivity: | Mouse (Murine)                                              |
| Characteristics:  | Muellerian-inhibiting factor Polyclonal Conjugated Antibody |

## Target Details

|                   |                                                               |
|-------------------|---------------------------------------------------------------|
| Target:           | AMH                                                           |
| Alternative Name: | Muellerian-inhibiting factor ( <a href="#">AMH Products</a> ) |
| Pathways:         | <a href="#">Negative Regulation of Hormone Secretion</a>      |

## Application Details

|                    |                                                     |
|--------------------|-----------------------------------------------------|
| Application Notes: | AF488 conjugated: most applications: 1: 50 - 1: 250 |
| Restrictions:      | For Research Use only                               |

Handling

---

|                  |                            |
|------------------|----------------------------|
| Storage:         | 4 °C                       |
| Storage Comment: | Store at 4°C for 6 months. |
