## Target Details

	Background: Involved in membrane trafficking between the Golgi complex and endosomes
	during early embryonic development. Regulates the Golgi to endosome transport of FGFR-
	containing vesicles during early development, a key process for developing basement
	membrane and epiblast and primitive endoderm lineages during early postimplantation
	development. May act by modulating the kinesin KIF16B-cargo association to endosomes (By
	similarity). Regulates, together with its guanine nucleotide exchange factor DENND6A, the
	specific endocytic transport of ADAM10, N-cadherin/CDH2 shedding and cell-cell adhesion.
Gene ID:	51552
