	Background: ABCE1 is a member of the superfamily of ATP-binding cassette (ABC)	
	transporters. ABC proteins transport various molecules across extra- and intra-cellular	
	membranes. ABC genes are divided into seven distinct subfamilies (ABC1, MDR/TAP, MRP,	
	ALD, OABP, GCN20, White). This protein is a member of the OABP subfamily. It is alternatively	
	referred to as the RNase L inhibitor as it functions to block the activity of ribonuclease	
	L(referenced from entrez gene).
