Target Details

Target:	BAP1		
Alternative Name:	BAP1 (BAP1 Products)		
Background:	Synonyms: UCHL2, hucep-6, HUCEP-13, Ubiquitin carboxyl-terminal hydrolase BAP1, BRCA1-		
	associated protein 1, Cerebral protein 6, BAP1, KIAA0272		
	Background: Deubiquitinating enzyme that plays a key role in chromatin by mediating		
	deubiquitination of histone H2A and HCFC1. Catalytic component of the PR-DUB complex, a		
	complex that specifically mediates deubiquitination of histone H2A monoubiquitinated at 'Lys-		
	119' (H2AK119ub1). Does not deubiquitinate monoubiquitinated histone H2B. Acts as a		
	regulator of cell growth by mediating deubiquitination of HCFC1 N-terminal and C-terminal		
	chains, with some specificity toward 'Lys-48'-linked polyubiquitin chains compared to 'Lys-63'-		
	linked polyubiquitin chains. Deubiquitination of HCFC1 does not lead to increase stability of		
	HCFC1. Interferes with the BRCA1 and BARD1 heterodimer activity by inhibiting their ability to		
	mediate ubiquitination and autoubiquitination. It however does not mediate deubiquitination of		
	BRCA1 and BARD1. Able to mediate autodeubiquitination via intramolecular interactions to		
	couteract monoubiquitination at the nuclear localization signal (NLS), thereby protecting it from		
	cytoplasmic sequestration (PubMed:24703950). Acts as a tumor suppressor.
