CFTR/MRP member 4, bA464I2.1, Canalicular multispecic organic anion transporter,
Canalicular multispecic organic anion transporter ABC superfamily, EST170205, MOAT B,
MOATB, MRP 4, MRP/cMOAT related ABC transporter, Multi specic organic anion transporter B,
Multidrug resistance associated protein 4, OTTHUMP00000018560, MRP4_HUMAN.
Background: The protein encoded by this gene is a member of the superfamily of ATP-binding
cassette (ABC) transporters. ABC proteins transport various molecules across extra- and intra-
cellular membranes. ABC genes are divided into seven distinct subfamilies (ABC1, MDR/TAP,
MRP, ALD, OABP, GCN20, White). This protein is a member of the MRP subfamily which is
involved in multi-drug resistance. The specific function of this protein has not yet been
determined, however, this protein may play a role in cellular detoxification as a pump for its
substrate, organic anions. Alternative splicing results in multiple splice variants encoding
different isoforms. [provided by RefSeq, Jul 2008].
