## anti-BOK antibody (Alexa Fluor 647)

[Go to Product page](#)

### Overview

|              |                                                    |
|--------------|----------------------------------------------------|
| Quantity:    | 100 µL                                             |
| Target:      | BOK                                                |
| Reactivity:  | Human                                              |
| Host:        | Rabbit                                             |
| Clonality:   | Polyclonal                                         |
| Conjugate:   | This BOK antibody is conjugated to Alexa Fluor 647 |
| Application: | Please inquire                                     |

### Product Details

|                   |                                     |
|-------------------|-------------------------------------|
| Cross-Reactivity: | Human                               |
| Characteristics:  | BOK(BH3 domain) Conjugated Antibody |

### Target Details

|                   |                                                               |
|-------------------|---------------------------------------------------------------|
| Target:           | BOK                                                           |
| Alternative Name: | BOK ( <a href="#">BOK Products</a> )                          |
| Pathways:         | <a href="#">Positive Regulation of Endopeptidase Activity</a> |

### Application Details

|                    |                                                     |
|--------------------|-----------------------------------------------------|
| Application Notes: | AF647 conjugated: most applications: 1: 50 - 1: 250 |
| Restrictions:      | For Research Use only                               |

Handling

---

|                  |                            |
|------------------|----------------------------|
| Storage:         | 4 °C                       |
| Storage Comment: | Store at 4°C for 6 months. |
