

Datasheet for ABIN6920878

**anti-Caspase 12 antibody (Alexa Fluor 647)**[Go to Product page](#)

## Overview

|              |                                                           |
|--------------|-----------------------------------------------------------|
| Quantity:    | 100 µL                                                    |
| Target:      | Caspase 12 (CASP12)                                       |
| Reactivity:  | Human, Mouse                                              |
| Host:        | Rabbit                                                    |
| Clonality:   | Polyclonal                                                |
| Conjugate:   | This Caspase 12 antibody is conjugated to Alexa Fluor 647 |
| Application: | Please inquire                                            |

## Product Details

|                   |                            |
|-------------------|----------------------------|
| Cross-Reactivity: | Human, Mouse (Murine)      |
| Characteristics:  | CASP12 Conjugated Antibody |

## Target Details

|                   |                                                                                                                                                                              |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Target:           | Caspase 12 (CASP12)                                                                                                                                                          |
| Alternative Name: | CASP12 ( <a href="#">CASP12 Products</a> )                                                                                                                                   |
| Pathways:         | <a href="#">Apoptosis</a> , <a href="#">ER-Nucleus Signaling</a> , <a href="#">Positive Regulation of Endopeptidase Activity</a> , <a href="#">Unfolded Protein Response</a> |

## Application Details

|                    |                                                     |
|--------------------|-----------------------------------------------------|
| Application Notes: | AF647 conjugated: most applications: 1: 50 - 1: 250 |
| Restrictions:      | For Research Use only                               |

Handling

---

|                  |                            |
|------------------|----------------------------|
| Storage:         | 4 °C                       |
| Storage Comment: | Store at 4°C for 6 months. |
