### Target Details

Target:	SNCA
Alternative Name:	Alpha Synuclein (SNCA Products)
Background:	Alpha-Synuclein (SNCA) is expressed predominantly in the brain, where it is concentrated in
	presynaptic nerve terminals (1). Alpha-synuclein is highly expressed in the mitochondria of the
	olfactory bulb, hippocampus, striatum and thalamus (2). Functionally, it has been shown to
	significantly interact with tubulin (3), and may serve as a potential microtubule-associated
	protein. It has also been found to be essential for normal development of the cognitive
	functions, inactivation may lead to impaired spatial learning and working memory (4). SNCA
	fibrillar aggregates represent the major non A-beta component of Alzheimers disease amyloid
	plaque, and a major component of Lewy body inclusions, and Parkinson's disease. Parkinson's
	disease (PD) is a common neurodegenerative disorder characterized by the progressive
	accumulation in selected neurons of protein inclusions containing alpha-synuclein and ubiquitir
	(5, 6). Alpha synuclein phosphorylated at serine 129 constitutes 90 % of the alpha synuclein
	found in Lewy bodies (7, 8).
Gene ID:	6622
NCBI Accession:	NP_000336
UniProt:	P37840
Pathways:	Synaptic Membrane, Regulation of G-Protein Coupled Receptor Protein Signaling, Positive
	Regulation of Endopeptidase Activity, Regulation of Carbohydrate Metabolic Process, Platelet-
	derived growth Factor Receptor Signaling, Negative Regulation of Transporter Activity,
	Regulation of long-term Neuronal Synaptic Plasticity
