## Product Details

Immunogen:	Human eosinophils from a patient with hypereosinophilic syndrome
Clone:	EP0104
lsotype:	IgG1 kappa
Specificity:	Peripheral blood granulocytes are classified into neutrophils, basophils and eosinophils
	according to the staining characteristics of their cytoplasmic granules. Granule proteins are
	released by physiologic and pharmacologic stimuli and play important roles in both normal and
	pathological host immune responses. Eosinophil major basic protein and eosinophil peroxidase
	(EPX) are granule proteins specific to the eosinophil. AHE-1 recognizes human EPX, a granule
	protein specific to eosinophils. It does not cross-react with eosinophil major basic protein,
	elastase, cathepsin G, esterase N, thrombin, plasmin, kallikrein, lactoferrin, or transferrin. This
	MAb stains eosinophils only and does not stain other peripheral blood cells, including platelets,
	neutrophils, monocytes, lymphocytes or red blood cells. Human EPX gene product can form a
	tetramer of two light chains and two heavy chains. Other peroxidase family members include
