Target Details

Target:	GPC1
Alternative Name:	Glypican 1 (GPC1 Products)
Background:	Glypican 1 has been shown to interact with SLIT2. This protein is involved in the misfolding of
	normal prion proteins in the cell membrane to the infectious prion form. Cell surface heparan
	sulfate proteoglycans are composed of a membrane-associated protein core substituted with a
	variable number of heparan sulfate chains. Members of the glypican-related integral membrane
	proteoglycan family (GRIPS) contain a core protein anchored to the cytoplasmic membrane via
