## Product Details

Immunogen:	Recombinant full-length human CSF3 protein
Clone:	CSF3-900
lsotype:	IgG1 kappa
Specificity:	This MAb recognizes granulocyte-colony stimulating factor (G-CSF) in the cytoplasm of mature
	granulocytes. It shows no reactivity with any other cell types. Markers of myeloid cells are
	useful in the identification of different levels of cellular differentiation. It reacts with early
	precursor and mature forms of myeloid cells. It is useful for the detection of myeloid leukemias
	and granulocytic sarcomas. It can be used as a marker of granulocytes in normal tissues or
	inflammatory processes. G-CSF is a pleiotropic cytokine that influences differentiation,
	proliferation and activation of the neutrophilic granulocyte lineage. The human G-CSF cDNA
	encodes a 207 amino acid precursor containing a 29 amino acid signal peptide that is
	proteolytically cleaved to form a 178 amino acid residue mature protein. Two G-CSF's, which
