Product Details

| Immunogen: | Recombinant human CD209 protein fragment (exact sequence is proprietary) |
|--------------|--|
| Clone: | C209-1781 |
| Isotype: | IgG2b kappa |
| Specificity: | DC-SIGN is a transmembrane receptor that is expressed on the surface of dendritic cells and |
| | macrophages. It is involved in the innate immune system and recognizes numerous |
| | evolutionarily divergent pathogens ranging from parasites to viruses. The protein is organized |
| | into three distinct domains: an N-terminal transmembrane domain, a tandem-repeat neck |
| | domain and C-type lectin carbohydrate recognition domain. The extracellular region consisting |
| | of the C-type lectin and neck domains has a dual function as a pathogen recognition receptor |
| | and a cell adhesion receptor by binding carbohydrate ligands on the surface of microbes and |
| | endogenous cells. The neck region is important for homo-oligomerization, which allows the |
| | receptor to bind multivalent ligands with high avidity. |
