#### Droduot Dotoile

Immunogen:	Recombinant human full-length KRT10 protein
Clone:	KRT10-1948R
Isotype:	IgG
Specificity:	This MAb recognizes a protein of 56.5 kDa, identified as cytokeratin 10 (CK10). CK10 is
	expressed in all suprabasal layers of the epidermis. In the epidermis, expression of CK10 strictly
	parallels the extent of differentiation, it is absent in the basal layer, appears in the first
	suprabasal layers and increases in concentration towards the granular layer. However, CK10 is
	rarely detected in early stages of vulvar squamous carcinomas (tumors less than 2 cm, clinical
	stage I) regardless of the tumor grade. In larger and more advanced tumors (greater than 2 cm,
	clinical stages II and III), CK10 is detected very frequently. Expression of CK10 is related to
	maturation of malignant keratinocytes, being preferentially detected in more-differentiated
