Product Details

Immunogen:	Recombinant human CD10 protein fragment (aa 583-740) (exact sequence is proprietary)
Clone:	MME-2579
Isotype:	IgG1 kappa
Specificity:	Recognizes a 100 kDa glycoprotein, identified as CD10, also known as Common Acute
	Lymphocytic Leukemia Antigen (CALLA). It is a cell surface enzyme with neutral
	metalloendopeptidase activity, which inactivates a variety of biologically active peptides. CD10
	is expressed on the cells of lymphoblastic, Burkitt s, and follicular germinal center lymphomas,
	and on cells from patients with chronic myelocytic leukemia (CML). It is also expressed on the
	surface of normal early lymphoid progenitor cells, immature B cells within adult bone marrow
	and germinal center B cells within lymphoid tissue. CD10 is also present on breast
	myoepithelial cells, bile canaliculi, fibroblasts, with especially high expression on the brush
	border of kidney and gut epithelial cells.
