Product Details

Immunogen:	Recombinant full-length human ZFYVE28 protein				
Clone:	LST2-2426				
lsotype:	lgG2a kappa				
Purification:	Purified by Protein A/G				

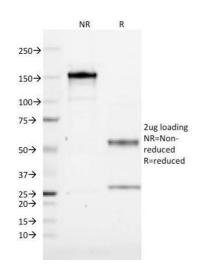

Target Details

Target:	ZFYVE28
Alternative Name:	ZFYVE28 (ZFYVE28 Products)
Background:	ZFYVE28 belongs to the lst-2 family. It contains 1 FYVE-type zinc finger. The FYVE-type zinc
	finger mediates the interaction with phosphatidylinositol 3-phosphate (PI3P) and localization to
	early endosome membranes when not mono-ubiquitinated at Lys-87. Mono-ubiquitination at
	Lys-87 prevents binding to phosphatidylinositol 3-phosphate (PI3P) and localization to early
	endosome membranes. ZFYVE28 is a negative regulator of epidermal growth factor receptor

Target Details

	(EGFR) signaling. It acts by promoting EGFR degradation in endosomes when not mono- ubiquitinated. The FYVE domain has been identified in a number of unrelated signaling					
	molecules. This protein functions to recruit SMAD2 to the transforming growth factor-beta					
	receptor. The FYVE domain is required to maintain the normal localization of this protein but is					
	not involved in mediating interaction with SMADs.					
Molecular Weight:	96kDa					
Gene ID:	57732

Protein Array

Image 2. Analysis of Protein Array containing more than 19,000 full-length human proteins using ZFYVE28 Mouse Monoclonal Antibody (LST2/2426) Z- and S- Score: The Zscore represents the strength of a signal that a monoclonal antibody (Monoclonal Antibody) (in combination with a fluorescently-tagged anti-IgG secondary antibody) produces when binding to a particular protein on the HuProtTM array. Z-scores are described in units of standard deviations (SD's) above the mean value of all signals generated on that array. If targets on HuProtTM are arranged in descending order of the Z-score, the S-score is the difference (also in units of SD's) between the Z-score. S-score therefore represents the relative target specificity of a Monoclonal Antibody to its intended target. A Monoclonal Antibody is considered to specific to its intended target, if the Monoclonal Antibody has an S-score of at least 2.5. For example, if a Monoclonal Antibody binds to protein X with a Z-score of 43 and to protein Y with a Z-score of 14, then the S-score for the binding of that Monoclonal Antibody to protein X is equal to 29.
